

100 97/21221

1

As shown in the drawings, the packaging 1 comprising a case 2 for a compact disc 3 (audio - figures 1 to 3 and audio and video - figures 4 and 5) is intended for display and sale of the said compact disc and, to allow reproduction of at least a part of the signals recorded on the latter without breaking the sealing means 4, formed for example of an envelope enclosing the case 2, means 5, independent of the compact disc 3, duplicating at least a part of the audio (figures 1 to 3) and audio and video (figures 4 and 5) signals from the disc 3, a circuit 6 comprising the means 5 in the form of an integrated circuit with memory, means 7 arranged for reproduction of the audio and audio and video signals stored in the integrated circuit or circuits 5, means for powering 8 the circuit 6 and means for control 9 of the circuit 6, which are arranged to actuate the reproduction of the above-mentioned signals.

As shown in the drawings, the circuit 6 with its integrated circuit or circuits 5, the means 7 providing the above-mentioned reproduction, the means powering 8 the circuit 6 and the means controlling 9 the latter are housed inside the case 2, preferably at its time of manufacture.

The above-mentioned control means 9 are arranged to not be actuated when the cases are arranged side by side and advantageously consist of a switch 10 designed to be able to be actuated by simple pressure applied from outside the case when this is in the closed and sealed position. This switch can consist, as shown in figure 1, of a push-button, the face of which visible from outside the case 2 is flush with the outside face of the latter. A switch 10 could also be provided, in accordance with the invention,

housed inside the case 2 and which would be operated by applying a pressure to a deformable zone formed in a wall of the case 2, opposite the said switch.

- 5 Where the above-mentioned means 7 reproduce only audio signals (figures 1 to 3), the means 7 and the means 9 are advantageously arranged in the proximity of a same face of the case 2. When the above-mentioned means 7 reproduce audio and video signals, (figures 4 and 5), these means 7  
10 and the control means 9 are also advantageously grouped in the proximity of a same face of the said case 2 and, preferably, in the same zone of this face.

- 15 To facilitate mounting of the above-mentioned means 5, 6, 7, 8 and 9 in the case, these are advantageously mounted and fixed on a plate 11 shaped for insertion in the case 2, in a zone left free by the compact disc (see figure 4).

- 20 The man skilled in the art, on seeing the diagrams in figures 3 and 5, will be able, in the light of the information gathered from the said diagrams and from the values of the electronic components given below, to reproduce the object of the invention in its embodiments  
25 described above.

Values of the electronic components of figure 3.

	R1	10	C3	100 nF
30	R4	2 k2	C4	100 nF
	R5	10 k	C5	100 nF
	R18	1 M5	C11	220 nF
	R19	1 M5	C12	220 nF
	R20	1 M5	C13	470 nF

R25	470 k	C15	100 $\mu$ F
		C16	100 $\mu$ F
		C17	220 $\mu$ F
		C18	220 $\mu$ F

- 5 IC1 integrated circuit type ISD 1020 (20") or 1050 (50")  
 Battery 2 x (CR 2025)  
 Loud-speaker  $\phi$  20 mm 6  $\Omega$   
 Switch (10) (HP) APEM, type MJTP 1230C

10 Values of the electronic components of figure 5

C1	100 NF
C2	10 $\mu$ F
C3	470 K
C4	100 NF

- 15 R1 6  $\Omega$   
 X1 (Resonator) 4 MHz  
 IC1 integrated circuit type Microchip Pic  
 16C56xT/S0  
 IC2 integrated circuit type ISD 1020 (20")  
 or 1050 (50")  
 20 LCD Series LM TOSHIBA

Loud-speaker (HP)  $\phi$  20 mm 6  $\Omega$ , 0.5 W.  
 Switch (10) APEM, type MJTP 1230C  
 Batteries 2 x (CR 2025)

- 25 It must be understood that the invention is in no way  
 limited to the embodiments described and that many  
 modifications can be made to these without departing from  
 the scope of the present patent.
